TECHNICAL SPECIFICATION FOR GALVANIZATION OF POLES

1.0 SCOPE

Corrosion commonly known as rust is the deterioration of a metal as a result of chemical reactions between it and the surrounding environment. Galvanising is the process of applying a protective zinc coating to steel in order to prevent rusting and corrosion. Also, Zinc corrodes approximately 1/10 to 1/40 the rate of steel depending on the environment, making zinc inherently less corrosive than steel. The life span of Hot Dip Galvanized Poles is 50 to 75 years. **This specification covers the Galvanization of Poles with Zinc coating of 86 micron**

2.0 SERVICE CONDITIONS

The Poles to be galvanized shall be suitable for satisfactory continuous exposure under the climatic conditions.

3.0 INSPECTION

All tests and inspection shall be made at the place of manufacture unless especially agreed upon by the manufacturer and purchaser at the time of purchase. The manufacturer shall afford the inspector representing the purchaser all reasonable facilities, without charge to satisfy him that the material is being furnished in accordance with this specification.

The purchaser has the right to have the test carried out at his own cost by an independent agency whenever there is a dispute regarding the quality of supply.

4.0 PACKING

Poles shall be delivered suitably packed. Although the method of packing is left to the discretion of the manufacturer it should be robust enough for rough handling that is occasioned during transportation by road.

All Poles shall be dispatched in boxes or cases. They shall be securely bound with wire and shall have all descriptive marking stamped thereon.

26.0 GUARANTEED TECHNICAL PARTICULARS

The guaranteed technical particulars of the Galvanization of poles offered shall be given by the tenderer along with the tender.
